

DOCUMENT NUMBERS

DOC NO. RL-BRAND-001-DOCNO-A REV. A RIPOSTE LABORATORIES

The `DOC NO.` chrome is not decoration. Every Riposte surface is filed, and this is the register. If a document carries a number, that number is here.

CONTENTS

▸ Format	2
▸ Series	2
▸ Registry	3
▸ Revisions	4
▸ Every repo carries a <code>BRAND.md</code>	5

SEC.01

FORMAT

RL-NNN-R	RL	Riposte Laboratories
	NNN	document number, from the series below
	R	revision letter, A onward

Written in full as DOC NO. RL-300-A, with REV. A alongside it when the two are separated (corner marks, titleblocks, colophons).

Sections within a document are SEC.NN, numbered in order from SEC.01. Those are local to the document and are not registered here.

SEC.02

SERIES

RANGE	CLASS
RL-000 - RL-099	Company: the website, identity, legal, corporate documents
RL-100 - RL-199	Plastic Works – injection moulding
RL-200 - RL-299	Project HEX – battery tiles
RL-300 - RL-399	Tools & software
RL-400 - RL-499	Partnerships, proposals, decks
RL-BRAND-NNN	The design system itself
RL-Z0	Channel Z0 – a designation, not a number (DESIG RL-Z0), predates this register
Project-specific	Hardware carries its own part-number series, which outranks a document number – e.g. IF-BG01
DB-NNN	Daily Bread – a separate publication brand, filed apart on purpose

SEC.03

REGISTRY

NUMBER	DOCUMENT	REPO
RL-000-A	ripostelabs.xyz – the website	riposte-labs
RL-BRAND-001-A	Brand & design system	riposte-brand
RL-Z0-A	Channel Z0 – station and playout	channel-z0
RL-300-A	bean – natural language to QuickBooks Online	bean
RL-310-A	Cutsheet – print sheet layout and cut lines	cutsheet
RL-320-A	e-paper dashboard	epaper-dashboard
RL-330-A	FLIPDOT 28x14 – simulator and hardware	flipdot-28x14
RL-340-A	RAV4 / Van44 roof rack isolated 12 V busbar	rav4busbar
IF-BG01	Iris ball-lock fastener – build dossier	iris-ball-lock-fastener
RL-350-A	Riposte Laboratories API – the public JSON API	riposte-api
RL-360-A	Glitzzy – glitch chain studio and Etsch cut sheets	glitzzy
RL-361-A	Glitchsheet – the v1 chain studio, kept for rollback	glitchsheet
RL-370-A	glitchlock – reversible video scrambler	glitchlock
DB-100-A	Daily Bread – brand relationship	daily-bread

Sub-documents append a suffix rather than taking a new number: RL-BRAND-001-COLOR, RL-BRAND-001-PRINT, RL-BRAND-001-CANVA.

Two suffixes carry the design system onto paper rather than describing it: RL-

BRAND-001-TEX is the LaTeX implementation (riposte-latex) and RL-BRAND-001-MD is the document set built from every repo's Markdown (riposte-docs). Each document in that set is filed under its own repo's number with a suffix – RL-Z0-BUILD-GUIDE, RL-200-HEX-ENC, and so on – so a rendered document and its source carry the same identifier.

SEC.04

REVISIONS

- ▶ Start at REV. A. It is a starting point, not a requirement to reset – a project with real revision history keeps it (IF-BG01 is at REV. F and should stay there).
- ▶ Bump the letter when the **content** changes materially, not when a typo is fixed.
- ▶ The revision letter belongs to the document, not the repo. A README at REV. C in a repo at v2.1.0 is normal.

SEC.05

EVERY REPO CARRIES A BRAND.md

It states three things, and it is an audit rather than a badge:

1. **Conforms** – what already follows the guide.
2. **Deliberately diverges** – what does not, **and why**. This is the important section. Channel Z0's CRT phosphor palette, FLIPDOT's yellow-on-black panel simulation, e-paper dashboard's Bootstrap UI and Daily Bread's whole identity are all correct divergences, and each is recorded so nobody "fixes" them.
3. **Queued** – real conformance debt, with the concrete mapping to apply.

A divergence that is written down is a decision. A divergence that isn't is a bug.
