CONTRAST MATRIX (WCAG 2.1)

Foreground on background. AA needs 4.5:1 for body text, AA Large needs 3:1 and applies only to text at 24px+ or bold 18.66px+ – which in this system means uppercase display and chrome, never prose.

FOREGROUND	BACKGROUND	RATIO	GRADE	VERDICT
ink	bone	15.39:1	AAA	Safe for body copy
ink	bone-dim	13.66:1	AAA	Safe for body copy
ink	white	17.32:1	AAA	Safe for body copy
bone	pink	3.16:1	AA Large	Display/chrome only – never body copy only
ink	pink	4.87:1	AA	Safe for body copy
bone	pink-deep	4.53:1	AA	Safe for body copy
ink	orange	8.12:1	AAA	Safe for body copy
bone	orange	1.90:1	FAIL	Decoration only – never text
bone	orange-deep	4.53:1	AA	Safe for body copy
bone	teal	2.27:1	FAIL	Decoration only – never text
ink	teal	6.79:1	AA	Safe for body copy

SEC. 03 THE RULE THIS TABLE EXISTS TO ENFORCE

The brand's fixed pairings – **bone on pink**, **bone on teal** – are **brand-correct but not text-safe**. They land at 3.16:1 and 2.27:1. Keep them for chips, spec headers, section bars and large uppercase display, where they are the brand. The moment an accent fill has to carry a **sentence**, switch to the **-deep** variant: same hue, same saturation, lightness dropped until bone clears 4.5:1.

ink on **orange** (8.12:1) is the one accent fill that is safe for prose as-is. That is why marigold takes ink text and the other two take bone.

SEMANTIC TEXT TIERS

Resolved out of brand/riposte-brand.css – color-mix() steps included – and measured against the same block’s own -bg. A field whose -text is safe for body copy must keep -text-muted safe for body copy too; -text-faint is a chrome tier and only has to clear the large-text floor of 3.
